UPDATE TO ALL FAMILY AND FRIENDS

Hello, unfortunately we have had another positive staff case from the surveillance testing this week, which means our outbreak continues. However, the staff member is not direct care staff and their resident interaction is minimal. The outbreak continues but no resident home areas will be on full precautions.

The existing precautions remain in place:

- Everyone needs to continue to wear masks and eye protection as we must continue to follow droplet precautions.
- Dining room service is for one half of the residents at a time to maintain social distancing.
- Small group programs can be held on the home areas with physical distancing.
- Garden walks are open as per the schedule of one home area at a time to ensure that residents are not interacting with those from other home areas.

Yesterday the vaccination clinic at St. Pat's had 81 second doses being completed. Three residents, 64 staff and 14 designated caregivers received their second dose! The Paramedic staff were late in arriving but once they got here the clinic went smoothly. Once we know anything further on when there is vaccine for those who have not yet had their vaccination we will let you know.

Stay safe and enjoy Family Day. The next update will be planned for Wednesday, February 17th.
