## **UPDATE TO ALL FAMILY AND FRIENDS**

Hello, we have had one positive rapid test of a sitter today from Wexford. They are now at home and the results of the PCR test are pending. The one resident who was in contact with the sitter is on isolation. There are no additional precautions required as there is no contact with other residents.

We are still awaiting the final resident PCR result from Donegal.

As always, when a resident has any symptoms, they are placed on isolation and a PCR swab is done. Once the negative result is received, the resident can be removed from isolation precautions once there are feeling better. This has been the practice throughout the pandemic and it remains in place.

Be well and stay safe,
