UPDATE TO ALL FAMILY AND FRIENDS

Hello, although the number of positive rapid tests has continued to decrease we do have people continuing to test positive. The protocol is that if a resident has been a low risk contact, they are tested on day 5 following the contact, but they do not need to isolate. If a resident does test positive they will isolate as well as any other residents who is a high risk contact.

Ceiling lifts

In previous years the fourth and fifth floor have had additional ceiling lifts installed. This year we are adding more ceiling lifts tracks on the second and third floor. These additional ceiling lifts will be installed next week on the third floor. There are additional ones coming for the second floor at a later date. The installation takes approximately 1 hours in each room and while that is happening the resident will need to be out of the room. The schedule for the installation is being developed and when it is confirmed the resident and their family will be notified. When the tracks are available in the majority of rooms, we can then install the actual lift mechanism quickly should someone need a lift now or at a later date.

Be well and enjoy this wonderful weather,

Janet Morris
