UPDATE TO ALL FAMILY AND FRIENDS

Hello, we are happy to report that the enteric (gastrointestinal) outbreaks on Wexford and Galway are declared over. On Carlow there are no active cases and if this remains the situation the enteric outbreak will be over tomorrow.

We are in suspect outbreak on Waterford as one resident has tested positive for Covid19. We have no other residents with symptoms and therefore are not considered in outbreak. There are no limitations on visiting to Waterford.

Pest Control

On occasion we have been treating various home areas for insects, including some cockroaches. We use a professional pest control company for this and most of the treatments are in the food service areas, as this is where we have seen some insects. Treatments have been done on 3rd, 4th and 5th floor.

There are a number of monitoring measures in place so that there is a quick response to any evidence of insects.

Stay healthy and safe,

Janet Morris

President and CEO
